In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

Please note: Global use of the config.txt directive "HTTPHeader Accept-Encoding" conflicts with the above stanza. In order to proxy the Directory of Music Faculties, this directive must be applied to individual stanzas that require it, for example:

```
Title Some Database
HTTPHeader -request -process Accept-Encoding
URL https://www.somedb.com
...
```

Please contact OCLC Support if you need assistance.
