In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

EBSCO's LinkSource requires EZproxy 2.0i (2003-03-09) or later.

| Option DomainCookieOnly
| Title -hide EBSCO Full Text Finder
| URL http://resolver.ebscohost.com
| HJ resolver.ebscohost.com

This database stanza should appear in config.txt before any other EBSCO database stanzas.

The Title directive's -hide option was introduced in EZproxy 3.2a (2005-03-28) and suppresses the database stanza from appearing in the generated menu. If you are using an older release of EZproxy, you should omit -hide.
