In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

The DOI (Digital Object Identifier) System is used when mapping a DOI name (e.g., 10.1000/182) into a DOI link (e.g., http://dx.doi.org/10.1000/186) which is mapped through the DOI System to the content it represents (e.g., a particular journal, volume, article). A variety of database vendors use DOI links to provide links to content that may be contained in other databases hosted by any number of database vendors.

- Title DOI System
- URL http://doi.org
- Host https://doi.org
- Host dx.doi.org
- Host https://dx.doi.org
- Domain doi.org
