Find an overview of the CONTENTdm API, which is a read-only web service to access CONTENTdm collections and records in JSON or XML format.

The CONTENTdm API is a read-only web service to access CONTENTdm collections and records in JSON or XML format. For a given CONTENTdm website URL you can access the API via the `/bl/dmwebservices/` URL path. For example, on the CONTENTdm Sandbox site, the JSON call to list the collections looks like this:

For complete details on the CONTENTdm API, please see CONTENTdm API Reference.
