Embed Internet Archive book reader

Link: See a live example.

View: View source code in CONTENTdm Cookbook Demo Site.

Much like the video stream embed example, any external web resource that supports embedding can be pulled into a CONTENTdm item view page if the stored item is a URL to the embed source. The Internet Archive’s Book Reader is a good example of this. If you have stored digitized books with the Internet Archive and like their Book Reader UI, you can pull that into your CONTENTdm site using a JavaScript customization. This customization reuses a generic template for pulling in external content but adapts it specifically for the Internet Archive Book Reader.
