The WorldCat Digital Collection Gateway is a self-service tool for harvesting the metadata of your unique, open-access digital content into WorldCat. Once there, your collections are more visible and discoverable to end users who search WorldCat as well as other popular websites.

**Get started**

Find information about getting started with the WorldCat Digital Collection Gateway.

- About WorldCat Digital Collection Gateway
- Enable WorldCat Sync from CONTENTdm Administration
- Information for metadata contributors
- Register to use the WorldCat Digital Collection Gateway

**Use the Digital Collection Gateway**

Use this guide to lead you through the steps for using the WorldCat Digital Collection Gateway to add records to WorldCat from OAI-PMH compliant repositories or your CONTENTdm metadata records.

- Overview of WorldCat Digital Collection Gateway
- Collection configuration and metadata crosswalking
- Manage users and repositories
- Prepare a collection for the Gateway
- View and edit the metadata map
- Synchronization with WorldCat
- View synchronization reports

**Digital Collection Gateway training**

**Frequently asked questions**

Find frequently asked questions about the Digital Collection Gateway.
Can I create a collection description in Gateway?

Can I register more than one CONTENTdm user with the WorldCat Digital Collection Gateway?

Can I register more than one repository with the Digital Collection Gateway?

Can I tell the Gateway how to display a thumbnail for my digital content?

Can more than one person from my organization use the WorldCat Digital Collection Gateway?

Can one source metadata field be mapped to multiple WorldCat.org display fields?

Does all metadata have to come from source data, or can I specify more collection-level data in mappings?

Does my use of the Gateway make my organization a member of OCLC?

How do I create a collection description in Gateway?

How will duplicates be handled? For example, if my organization has a rare book that we've digitized and harvested, what happens if another institution harvests that same book?

I'm using Connexion digital import to load records into one of my CONTENTdm collections. Should I use the WorldCat Digital Collection Gateway?

In the Manage Accounts tab of the Gateway I notice that I can select a repository type from a pull-down list. Are there different features available for different repository types?

Is there a suggestion on how I should configure data such as language codes?

It appears that some of my records were not harvested to WorldCat. How can I tell what happened?

I noticed the Gateway checking my repository to see if it supports metadata prefix "oclc_dc". What is this?

Metadata in my repository is contributed by several different organizations. How can these organizations be given attribution in WorldCat?

My server configuration has changed. How do I change the corresponding harvest URL in the Digital Collection Gateway?

The OAI-PMH protocol allows the transfer of any metadata format that has a valid, addressable schema/namespace. My repository can support Dublin Core and MARC. Since we can supply MARC, can that be used?

What if there are only certain collections that I want Gateway to harvest?

What if there are only certain sets that I want Gateway to harvest?

What is the difference between Replace all Records and Add New Records

What is the WorldCat Digital Collection Gateway?

When I am viewing my digital records in the WorldCat Digital Collection Gateway, the number of records in a collection sometimes changes

When I log into the WorldCat Digital Collection Gateway, am I able to harvest my entire repository as one set?

Where did WorldCat Item View go?

Why am I getting errors in the Gateway when I attempt to use the Qualified Dublin Core metadataPrefix with my DSpace server?

Why am I seeing "Unable to validate record"?
