Install and update EZproxy

Find the tools and resources required for installing EZproxy and downloading updates. When you are ready to install EZproxy, it is best to have your subscription confirmed and your license key, called a WSKey, ready to install. If you have any additional questions about the WSKey or installation process, please contact OCLC Support.

Note: If you obtained a WSKey when you updated to any V6.x, you must use the same WSKey to upgrade to any new release of EZproxy.

- **EZproxy server file permissions**
  - [No image available]
  
  The following files can be used to secure your EZproxy server by assigning specific permissions and including the given configurations.

- **EZproxy WSKeys**
  - [No image available]

  A WSKey (Web Service Key) is the license key that allows you to run your instance of EZproxy. A WSKey is required for all versions of EZproxy 6.0 and later, as the license keys from previous versions of EZproxy will not work with EZproxy 6.0.

- **Restart EZproxy**
  - [No image available]

  EZproxy requires restarting after configuration and updates are made.

- **WSKey validation and messages**
  - [No image available]

  When an EZproxy administrator installs the WSKey for an EZproxy subscription, EZproxy will contact the WSKey server and attempt to validate that key.

- **Install and update self-hosted EZproxy**
  - [No image available]

  This is an addendum to your current EZproxy Terms and Conditions. You will need to agree to the Terms and Conditions provided before downloading any software or updates.
