Insignia authentication

Last updated: Mon, 26 Mar 2018 19:51:33 GMT

Configuration

EZproxy can be configured to verify patron information against the account feature of an Insignia server. A sample configuration is:

```text
::Insignia
Unauthenticated; Stop
/Insignia
```

where the URL provided is the URL that points to the MyAccount page in the Insignia catalog.

In addition to the directives shown, the Insignia block may also incorporate any of the common conditions and actions.
