Find information about the typographic conventions used in the EZproxy config.txt directive documentation.

**Style**

The documentation uses the following typographic conventions:

<table>
<thead>
<tr>
<th><strong>Bold</strong></th>
<th>is used for directories, filenames, directives, qualifiers, and options. All terms show in bold are typed literally.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Italic</strong></td>
<td>is used to show generic qualifiers and options. These should be replaced with user-supplied values. Italic is also used to highlight comments in examples.</td>
</tr>
<tr>
<td><strong>Constant Width</strong></td>
<td>is used in examples to show the contents of files and to show directives included in files.</td>
</tr>
<tr>
<td><strong>Brackets ([ ])</strong></td>
<td>surround optional elements in a description of syntax. The brackets themselves should not be typed.</td>
</tr>
<tr>
<td>**Pipe (</td>
<td>)**</td>
</tr>
</tbody>
</table>

**Case insensitive**

In this documentation, capitalization was used only to improve readability. Directives, qualifiers, and options are case-insensitive.
