EZproxy for Windows error select returned 10055

Last updated: Mon, 03 Aug 2020 15:52:54 GMT

If you are using EZproxy for Windows and encounter the select returned 10055 error, these troubleshooting tips could resolve the issue.

In EZproxy for Windows, if the error:

```plaintext
select returned 10055
```

appears in messages.txt, then the most common causes are:

- Windows Firewall does not include EZproxy in its configuration
- Windows 2003 is running at less than Service Pack 2

When diagnosing this error, if none of this information helps resolve the problem, contact OCLC Support for further assistance.
